

FDM RMS

Streamline data entry, reporting and analysis with FDM RMS, a fully configurable integrated Records Management System that's fast, reliable and easy to use.

Innovative Solutions for Public Safety

View of False Alarm incident records.

Today, the information explosion that organizations face means an increased challenge in effectively gathering, assimilating and managing data. FDM RMS meets this challenge head on with a proactive solution that improves data access and analysis, plus the tools to leverage this information for well-informed business decisions.

Manage Information

The RMS user interface is standard across all modules, increasing data entry accuracy. One-click access means that information fields completed in one module are shared throughout the application, eliminating redundant data entry.

Graphic wizards take you step by step through data requirements and reporting features.

Customization options allow you to create or modify forms and reports, and record additional data by adding columns to FDM RMS tables.

Analyze Data

FDM RMS is a complete "off-the-shelf" application that manages daily operations

for most departments, including standard forms and reports for fire and EMS agencies. Our integrated modules are designed to grow with your agency in either a metro or multi-agency setting.

FDM RMS automatically integrates with FDMCAD or your agency's existing computer aided dispatch system to expand your database capabilities. The embedded ESRI mapping engine and full powered report builder provides unmatched data analysis. FDM GIS Analyst, an add-on application, enhances station and resource planning with real time analysis of spatial and non-spatial information.

Effective Planning

FDM RMS provides advanced reporting tools to proactively manage staff and agency assets. We have extensive experience interfacing to third-party applications for seamless data extraction and analysis. FDM builds in flexibility to optimize your RMS value over time, as agencies strategically manage their workflow in ways that work best for them, on their timeline.

Extend your RMS desktop into mobile operations with real time data access and synchronization over public/private networks. FDM Mobile RMS retains your personal settings and menus for data entry and saves time in the field. Customized data access reduces training and implementation costs.

Committed to Client Satisfaction

Our Client Services team provides full-service support from system implementation to on-site installation, and 24/7 technical support. Your calls are answered by our staff so you get the answers you need, when you need them.

FDM RMS is an enterprise solution with the rich functionality to meet today's challenges and the flexibility to meet tomorrow's needs.

Integrated modules manage all business requirements.

Reliable

- Related records are automatically linked to save time and increase efficiency.
- Data validation tool ensures accurate reports prior to submission.
- Comprehensive security model controls end user access to data.
- Data integrity and accuracy is enforced through user-defined validation rules.

Integrated

- Proven interoperability with third-party databases, comprehensive GIS analysis, and seamless data imports means more options for interpreting records information.
- Import and export data to and from your FDM system or non-proprietary databases with our synchronization manager.

- Data is entered once and shared throughout the application for one-step access.
- Supports Microsoft SQL Server™ and Sybase SQL Anywhere™ databases.

Customizable

- The scalable RMS database is easily modified to your agency's workflow and business practices.
- From the screen appearance to printed reports, customize the look and feel to your department's preferences.

Flexible

- Powerful database querying uses standard reports or our built-in report builder for optimal resource planning.
- Compliant with North American regional and national reporting requirements.
- Add modules as your department grows and lower costs by regionalizing multiple departments and services with FDM Workspacing.

Mobile

- Mobile solutions optimize narrow bandwidths by compressing and encrypting data.
- Instant access to records, data and property information using wireless and offline options.
- Mobile RMS uses the same FDM software and user interface to simplify training and reduce implementation costs.

Helping public safety agencies make better decisions for the safety of their communities.

About FDM Software

Since 1990, FDM Software Ltd. has been an innovative provider of multi-purpose software solutions for information management. Based in North Vancouver, B.C. with offices in Washington, Utah, and Ontario, FDM combines industry expertise and robust software development for full scale public safety solutions.
